

AMENDMENTS TO THE CLAIMS

1-8. (Cancelled)

9. (Currently Amended) An ingredient cooking-operation recognition system comprising:

a sensing means for acquiring observation data which includes ~~at least either of an image~~ around the hands of a person who performs a cooking operation and an environment sound that is produced by the cooking operation;

a feature-quantity template in which various cooking operations that are predetermined for various ingredients are stored together with a template certainty factor that is a certainty factor which is predetermined for each cooking operation of the ingredients;

a cooking-flow creating means for, based on the observation data ~~which is acquired by the sensing means~~, calculating an observation certainty factor which indicates the certainty factor of at least either of an ingredient that is cooked by the person and the cooking operation of the ingredient, and based on ~~this the~~ observation certainty factor, creating a cooking flow for a dish which is prepared by the person;

a primary certainty-factor calculating means for, ~~based on the template certainty factor and the observation certainty factor~~, calculating a primary certainty factor which is a certainty factor for each ~~of objects~~object that ~~make~~makes up the cooking flow ~~which is created by the cooking-flow creating means~~based on the template certainty factor and the observation certainty factor; and

a cooking-operation recognizing means for recognizing the ingredient and the cooking operation that correspond to the observation data ~~which is acquired by the sensing means~~, based on the primary certainty factor ~~which is calculated by the primary certainty-factor calculating means~~; and

a guidance means for providing guidance to the person regarding the cooking recipe based on the ingredient and the cooking operation recognized by the cooking-operation recognizing means, wherein the person performs the cooking operation in accordance with the guidance.

10. (Currently Amended) The ingredient cooking-operation recognition system according to claim 9, further comprising:

a cooking-flow database which stores cooking flows which are created in advance of cooking operations for various dishes; and

a relevance-factor calculating means for, using mapping, calculating a relevance factor that indicates which of the cooking flows that are stored in the cooking-flow database is closest to the cooking flow which is created by the cooking-flow creating means,

wherein the cooking-operation recognizing means calculates a final certainty factor based on the relevance factor which is calculated by the relevance-factor calculating means and the primary certainty factor, updates the feature-quantity template by considering the final certainty factor as a new template certainty factor, and based on the feature-quantity template, recognizes an ingredient and a cooking operation.

11. (Currently Amended) The ingredient cooking-operation recognition system according to claim 9, further comprising:

a table storing means for storing ~~at least any one of~~:

an ingredient table which is formed by an ingredient record that has a field where data that indicates an ingredient is stored and a field where various kinds of data on the ingredient are stored together with a the template certainty factor that is predetermined for the data;

a cooked-food table which is formed by a cooked-food record that has a field where data that indicates a cooking operation is stored and a field where various kinds of data on a change in an ingredient by the cooking operation are stored together with a the template certainty factor that is predetermined for the data; and

a cooking-operation table which is formed by a cooking-operation record that has a field where data that indicates a cooking operation is stored and a field where various kinds of data on an environment sound that is produced by the cooking operation are stored together with a the template certainty factor that is predetermined for the data;

a cooking-recipe database which stores data that indicates an ingredient which is used for various cooking recipes and data that indicates a cooking operation for the ingredient;

an extracting means for extracting all kinds of ingredients and all kinds of cooking operations which are stored in the cooking-recipe database; and

a feature-quantity template creating means for creating, as a feature-quantity template, a table which includes fields defined by, ~~as items including~~, each ingredient that is extracted by the extracting means and each cooking operation that is extracted by the extracting means, and ~~the feature-quantity template creating means writing for specifying~~, in an optional field of the fields which make up the feature-quantity template, ~~as the template certainty factor, the greatest certainty factor of the template certainty factors which are stored in each field of at least any record of the ingredient record of the ingredient table that stores the data which indicates the ingredient that corresponds to the optional field, the cooked-food record of the cooked-food table that stores the data which indicates the cooking operation that corresponds to the optional field and the cooking-operation record of the cooking-operation table that stores the data which indicates the cooking operation that corresponds to the optional field, and writing the greatest template certainty factor among the template certainty factors which are stored in each field of the specified records in the optional field.~~

12. (Currently Amended) The ingredient cooking-operation recognition system according to claim 9, ~~characterized in that~~wherein:

the sensing means has a thermal camera and an optical camera; and

an image which is acquired by the sensing means includes a thermal image which is photographed by the thermal camera and an optical image which is photographed by the optical camera.

13. (Currently Amended) The ingredient cooking-operation recognition system according to claim 12, ~~characterized in that~~wherein the cooking-flow creating means:

removes a background region from the optical image by executing a background difference ~~processing process~~ on the optical image;

removes, from the thermal image, as a background region, a region where the temperature is equal to, or higher than, a predetermined value;

calculates an ingredient region which indicates an ingredient by multiplying the thermal

image whose background region is removed and the optical image whose background region is removed; and

calculates an observation certainty factor based on ~~this~~ the ingredient region.

14. (Currently Amended) The ingredient cooking-operation recognition system according to claim 9, ~~characterized in that~~ wherein the cooking-flow creating means obtains a histogram of hue and a histogram of saturation from an image which is acquired by the sensing means, and estimates an ingredient by obtaining a correlation between ~~these~~ the histograms and a color-feature template which is predetermined for each ingredient.

15. (Currently Amended) The ingredient cooking-operation recognition system according to claim 10, ~~characterized in that~~ wherein:

the relevance-factor calculating means estimates a cooking recipe based on a relevance factor; and

a ~~the~~ guidance means provides guidance ~~is further provided for giving,~~ to the ~~person,~~ person guidance ~~on regarding the cooking recipe which is estimated by the relevance-factor calculating means.~~

16. (Currently Amended) A computer-readable recording medium which is has recorded with thereon an ingredient cooking-operation recognition program, ~~characterized by allowing for causing~~ a computer to function at least as:

a sensing means for acquiring observation data which includes ~~at least either of~~ an image around the hands of a person who performs a cooking operation and an environment sound that is produced by the cooking operation;

a feature-quantity template in which various cooking operations that are predetermined for various ingredients are stored together with a template certainty factor that is a certainty factor which is predetermined for each cooking operation of the ingredients;

a cooking-flow creating means for, based on the observation data ~~which is acquired by the sensing means~~, calculating an observation certainty factor which indicates the certainty factor of at least either of an ingredient that is cooked by the person and the cooking operation of the

ingredient, and based on ~~this~~the observation certainty factor, creating a cooking flow for a dish which is prepared by the person;

a primary certainty-factor calculating means for, ~~based on the template certainty factor and the observation certainty factor~~, calculating a primary certainty factor which is a certainty factor for each of ~~objects~~object that ~~make~~makes up the cooking flow ~~which is created by the cooking-flow-creating means~~based on the template certainty factor and the observation certainty factor; and

a cooking-operation recognizing means for recognizing the ingredient and the cooking operation that correspond to the observation data ~~which is acquired by the sending means~~, based on the primary certainty factor ~~which is calculated by the primary certainty factor calculating means~~; and

a guidance means for providing guidance to the person regarding the cooking recipe based on the ingredient and the cooking operation recognized by the cooking-operation recognizing means, wherein the person performs the cooking operation in accordance with the guidance.
